Relationship Count	Total no. of products held by the customer
Credit Limit	Credit Limit on the Credit Card
Revolving Balance	Total Revolving Balance on the Credit Card
Trans Amount	Total Transaction Amount
Trans Count	Total Transaction Count

💳 Credit Card Customer & Transaction Analysis

This project focuses on analyzing credit card customer behavior to improve business performance and customer engagement. It uses customer demographics and transaction data to uncover meaningful patterns and insights.

📌 Scenario

A bank wants to understand which customer segments generate the most transactions, how factors like age, income, and card type affect spending, and whether inactivity leads to reduced engagement. The goal is to identify high-value customers

🛠️ Approach

I built an interactive Power BI dashboard and analyzed key metrics such as transaction amount, transaction count, credit limit, and customer activity. I used bar charts, line charts, and combo charts to compare segments and identify behavioral trends.
