Introduction Page

CLIENTNUM	Client number. Unique identifier for the customer holding the account
Customer Age	Customer's Age in Years
Gender	M=Male, F=Female
Education Level	Educational Qualification of the account holder (example: high school,...
Marital Status	Married, Single, Divorced, Unknown
Card Category	Type of Card (Blue, Silver, Gold, Platinum)
Relationship Count	Total no. of products held by the customer
Credit Limit	Credit Limit on the Credit Card
Revolving Balance	Total Revolving Balance on the Credit Card
Trans Amount	Total Transaction Amount
Trans Count	Total Transaction Count

💳 Credit Card Customer & Transaction Analysis

This project focuses on analyzing credit card customer behavior to improve business performance and customer engagement. It uses customer demographics and transaction data to uncover meaningful patterns and insights.

📌 Scenario

A bank wants to understand which customer segments generate the most transactions, how factors like age, income, and card type affect spending, and whether inactivity leads to reduced engagement. The goal is to identify high-value customers

🛠️ Approach

I built an interactive Power BI dashboard and analyzed key metrics such as transaction amount, transaction count, credit limit, and customer activity. I used bar charts, line charts, and combo charts to compare segments and identify behavioral trends.

Credit Card Transaction Report

Total Transaction Amount	Total Transaction Count	Total Revolving balance	Total Relationship count
45M	657K	12M	39K

Blue	Gold	Platinum	Silver

F	M

Card Type	Total Transaction Amount	Total Transaction Count	Total Revolving Balance
Blue	39870938	604170	10925116
Silver	3657718	41459	669402
Gold	891531	9456	155941
Platinum	179995	1739	25359

Credit Card Customer Report

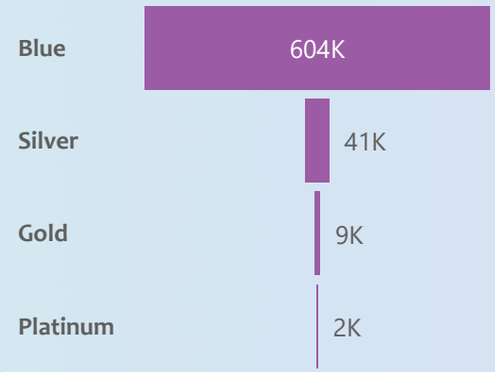
Total Transaction Amount	Total Transaction Count	Total Number Of Clients	Average of Credit limit
45M	657K	10K	9K

Blue	Gold	Platinum	Silver

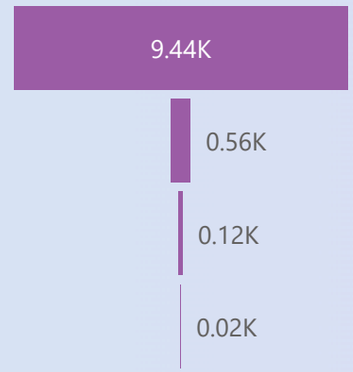
F	M

Card Type	Number of Card User	Total Transaction Amount	Total Transaction Count	Total Revolving Balance
Blue	9436	39870938	604170	10925116
Silver	555	3657718	41459	669402
Gold	116	891531	9456	155941
Platinum	20	179995	1739	25359

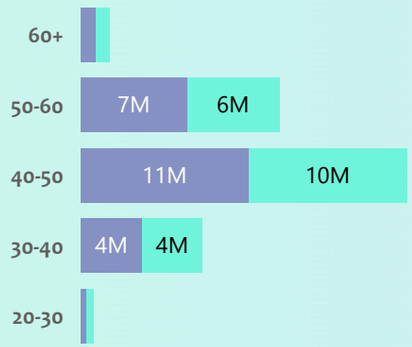
Transaction Count by Card Type



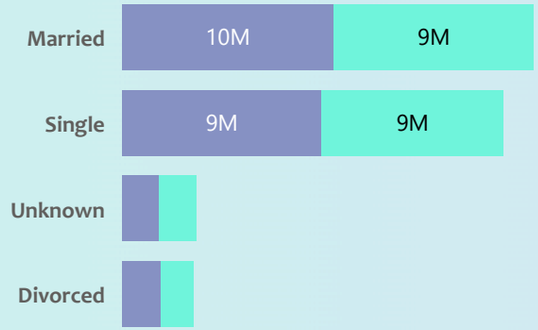
Clients by Card Type



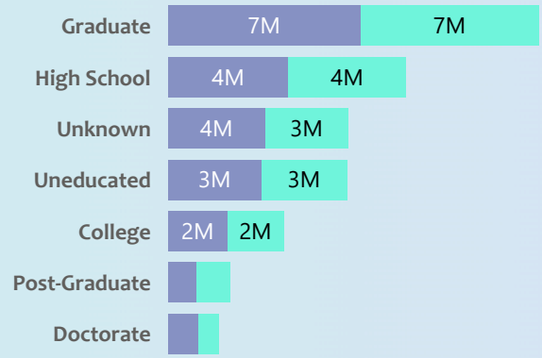
Transaction By Age Group



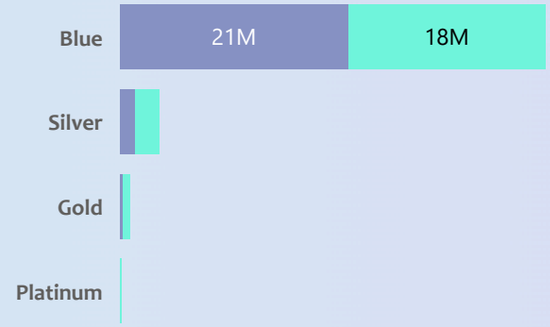
Transaction By Maritial Status



Transaction by Education type



Transaction By Maritial Status



Insights

1. Blue card category contributes the highest transaction amount and count
2. Premium cards (Gold, Platinum) have lower customer base and contribution
3. Customers aged 40-50 are the most active and generate maximum transactions
4. Younger and older age groups show comparatively lower engagement
5. Mass-market customers drive most of the revenue, not premium users.
6. Some segments have high credit limit but lower utilization
7. Inactive customers show clear signs of reduced engagement (churn risk)
8. A small number of customers (premium cards) have higher financial value
9. This indicates an opportunity to increase credit usage through targeting
10. Graduates and high school customers form the majority of users
11. Marital status does not significantly impact transaction behavior
12. Revenue is heavily dependent on mass-market (Blue card) customers
